

Looking for a challenging internship?

ThinkNext offers internship positions to enthusiastic master students in **software engineering**.

The company ThinkNext

ThinkNext specializes in the development and engineering of high-performance, critical web and mobile applications. Their philosophy is centered on building very well working things, that look good, solve actual problems and are pleasant to work with. ThinkNext is a team of pragmatic builders using a combination of state-of-the-art software and proven technology.

ThinkNext was founded in 2011 by Thomas Van Durme and Jelle Van Gompel, two software engineers from KULeuven with IT experience in the fields of aerospace (ESA) and consultancy (Altran, Electrabel) respectively.

What will you be doing?

Internships at ThinkNext are both technology and project oriented. In the beginning you will get familiar with the technologies while immediately being involved in the development of ongoing projects. Together with you we will find a good match for the choice of project/technology. This depends on your personal preference, the ongoing projects as well as the technologies you would like to explore.

Required knowledge / skills

- Object-oriented programming
- Java
- Web technologies (HTML, CSS, XML)
- SQL
- Language skills: native Dutch, advanced English

To give you a concrete idea, apart from the technologies mentioned above, ThinkNext also works with Apache Tapestry, Maven, Eclipse, jQuery, iOS, Apple, Xcode, Android, JUnit, Subversion, Linux, Jira, MySQL, Oracle, MSSQL,...

How to apply

So in summary, if you like to be part of small enthusiastic team of software builders, aren't afraid of a challenge and are eager to learn, than we would definitely like to hear from you! Send your curriculum vitae accompanied by a motivational letter to jobs@thinknext.be and you will hear from us soon!
