

Looking for a challenging job?

ThinkNexT is looking for young, enthusiastic **software engineers**.

The company ThinkNexT

ThinkNexT specializes in the development and engineering of high-performance, critical web applications en solutions in the field of Artificial Intelligence. At ThinkNexT we believe in challenging the status quo to simplify business. We do this with pragmatic thinking and using state-of-the-art technology. ThinkNexT is a team of pragmatic builders and was founded in 2011 by Thomas Van Durme and Jelle Van Gompel, two software engineers from KULeuven. This small company with great ambition is expanding and would like to have you on board!

What will you be doing now / in the future?

ThinkNexT is very much project oriented. In the beginning you will get familiar with the technologies and will immediately be involved in the development of ongoing projects. As you gain experience, you will be encouraged to take on projects on your own together with their various aspects (requirement engineering, architecture & design, development, testing, delivery, after-care).

Required knowledge / skills

- Object-oriented programming
- Java
- Web technologies (HTML, CSS, XML)
- SQL
- Development methodologies
(testing, version management, continuous integration)
- Language skills: native Dutch, advanced English

Optional (considered a plus)

- Apache Tapestry
- Hibernate
- Maven
- jQuery
- AI - technologies
(Python, Tensorflow, ...)

To give you a concrete idea, apart from the technologies mentioned above, ThinkNexT also works with Apple, Eclipse, junit, Subversion, Linux, Jira, MySQL,...

How to apply

So in summary, if you like to be part of small enthusiastic team of software builders, aren't afraid of a challenge and are eager to learn, than we would definitely like to hear from you! Send your curriculum vitae accompanied by a motivational letter to jobs@thinknext.be and you will hear from us soon!
